

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): A radio device, comprising:

a notch antenna, wherein said notch antenna ~~comprises~~ includes:

a circuit substrate comprising a ground portion, and a notch portion opened at one end thereof;

a radio circuit portion provided on said circuit substrate for supplying a high-frequency current to said notch portion; and

a conductive bent-back portion formed on said one end side of said circuit substrate and configured so as to be connected with said ground portion and to extend said notch portion, on said one end side of said circuit substrate.

Claim 2 (Original): A radio device as set forth in claim 1, wherein said bent-back portion is formed by integrally bending a portion of said circuit substrate.

Claim 3 (Original): A radio device as set forth in claim 1, wherein said circuit substrate has a multilayer structure in which one layer is a flexible printed cable, and said bent-back portion is formed by bending said flexible printed cable.

Claim 4 (Original): A radio device as set forth in claim 1, wherein said bent-back portion is formed by bending a metallic plate.

Claim 5 (Original): A radio device as set forth in claim 4, wherein

said bent-back portion is fixed to said circuit substrate by a screw for fixing both a casing for containing said radio device therein and said circuit substrate.

Claim 6 (Original): A radio device as set forth in claim 1, wherein said bent-back portion is comprised of:

a perpendicular portion rising substantially perpendicularly to said circuit substrate;
and

a parallel portion substantially parallel to said circuit substrate, said parallel portion formed so as to extend from the leading end of said perpendicular portion in a direction substantially orthogonal to the notch direction of said notch portion and to cross said notch portion.

Claim 7 (Original): A radio device as set forth in claim 1, wherein
said circuit substrate comprises two notch portions, and
said bent-back portion is provided to correspond to each of said notch portions.

Claim 8 (Original): A radio device as set forth in claim 7, wherein
both of said notch portions are provided on said one end side of said circuit substrate.

Claim 9 (Original): A radio device as set forth in claim 1, wherein
said bent-back portion is bent back to the side on which said radio circuit portion is provided, of said circuit substrate.

Claim 10 (Currently Amended): A cellular phone comprising:
a casing,

a circuit substrate incorporated in said casing and including a ground portion and a notch portion,

a radio circuit portion provided on said circuit substrate for supplying a high-frequency current to said notch portion, and

a conductive bent-back portion formed on one end side of said circuit substrate and configured so as to be connected with said ground portion and to extend said notch portion; ~~on one end side of said circuit substrate.~~

Claim 11 (Original): A cellular phone as set forth in claim 10, wherein

said bent-back portion is formed so as to be bent back to the side opposite to the side of a hand when said cellular phone is held on the hand.
